

# THE NEW WAY OF MANAGING ORACLE DEPLOYMENTS: SIMPLE, COLLABORATIVE, COMPLIANT

## Emoveo for Oracle E-Business Deployments

### FEATURES

- Create connections to any number of Oracle environments
- Configure deployment workflows compatible with your business processes
- Build your own migrators for your custom objects
- Utilize a modern dashboard to process and report on deployments
- Develop your own security model

### TECHNICAL DETAILS

- 100% web-based product
- Quick installation, agentless, and close to zero maintenance
- Highly configurable framework

### BENEFITS

- Increase productivity with modern, and efficient UI
- Increase visibility into status of active deployments
- Increase the quality of deployments through multiple built-in governance and control mechanisms
- Standardize the way you perform your deployments
- Comply with organizational, industry, and government regulations

Your existing options for management of Oracle E-Business deployments are severely lacking: Either using one-off command line scripts that are risky, non-compliant, and non-collaborative or using heavy-weight software packages that are expensive, hard to configure, and hard to maintain. Emoveo is an alternative option offering “best of both worlds” – easy to install, configure, and maintain yet providing all the key capabilities needed to ensure smooth and compliant migrations.

### Standardized Processes

Emoveo provides standardized processes, object types, and version control connectors to allow organizations to immediately get up and running. It also allows easy configuration of new processes and workflows to meet specific needs or applications, such as extra testing environments or for related applications like Demantra and Rapid Response.

Line ID	Line Name	Description	Object Type	Version	Owner	Last Update	Workflow Status	Comments	Actions
1	1.1	ADS-Accrue	ADS - Adjustment External	1.1	ADS	Submitted	Approved	Success	Right
2	1.2	ADS-Line Item	ADS - Line Item	1.2	ADS	Submitted	Approved	Success	Right
3	1.3	ADS-Menu	ADS - Menu	1.3	ADS	Submitted	Approved	Success	Right
4	1.4	ADS-Object	ADS - Object	1.4	ADS	Submitted	Approved	Success	Right
5	1.5	ADS-Gen Program	ADS - Gen Program	1.5	ADS	Submitted	Approved	Success	Right
6	1.6	ADS-Function	ADS - Function	1.6	ADS	Submitted	Approved	Success	Right
7	1.7	ADS-Key-Value-Field	ADS - Key Value Field	1.7	ADS	Submitted	Approved	Success	Right
8	1.8	ADS-Location	ADS - Location	1.8	ADS	Submitted	Approved	Success	Right
9	1.9	ADS-Message	ADS - Message	1.9	ADS	Submitted	Approved	Success	Right
10	1.10	ADS-Profile	ADS - Profile	1.10	ADS	Submitted	Approved	Success	Right
11	1.11	ADS-Request Group	ADS - Request Group	1.11	ADS	Submitted	Approved	Success	Right
12	1.12	ADS-Request Obj	ADS - Request Obj	1.12	ADS	Submitted	Approved	Success	Right
13	1.13	ADS-Role	ADS - Role	1.13	ADS	Submitted	Approved	Success	Right

### Modern UI with Full Visibility

Emoveo is an entirely stand-alone web-based application that does not require add-ons or agents. The software is compatible with the most popular browsers and easy to understand and use. Its simple and intuitive design allow end-users to quickly get started with minimal training and setup.

### Real Traceability

Emoveo provides full audit capabilities for tracking of both user approvals and instance deployments. It was built to be entirely SOX compliant and traceable. Through its reporting and logging capabilities, Emoveo can show exactly who and when an approval was made, when an object was deployed, and the exact results of the deployment.

### Rapidly deliver high-quality Oracle EBS deployments

Emoveo is a unique deployment tool built specifically with Oracle EBS deployments in mind. Its pre-configured workflows, object types, and version control connectors allow any organization to get up and running with their Oracle EBS deployments almost immediately. All of Emoveo's configurations are both R11 and R12 compatible and will also allow for migrations between the two versions during upgrades.
