

Integration Partner of MicroFocus

Adoption and Maturity Management Add-on for Micro Focus Project and Portfolio Management

KEY FEATURES

- Usage monitoring
- PPM maturity monitoring
- Data quality monitoring
- Targeted monitoring of configurable user and entity groups
- Easily configurable expected usage, maturity and quality ratings
- License allocation and assignment management
- Exception usage alerts
- Business Intelligence integration ready

BENEFITS

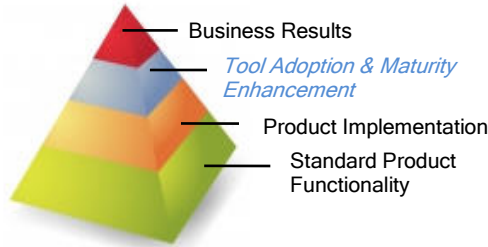

- Boost user adoption
- Enhance data quality
- Ascend the PPM Maturity Model
- Optimize Micro Focus PPM training and support
- Effective license management

PRODUCT ALIGNMENT

- PPM 7.x, 8.x, 9.x compatible
- Zero modifications to standard codebase
- Micro Focus standard entities and configurations leveraged

REDUCED COSTS

- Installed within several hours
- No extra hardware or software required
- Minimal storage space requirements
- Eschew the effort of building a custom point solution

In order to achieve strong business results from a PPM implementation, the organization needs to be able to provide hard data to objectively answer questions such as:

- How do users use the system?
- Which team members fail to meet the expected system's usage/maturity levels?
- Which IT groups have assigned more licenses to their users than allocated to them?
- Which users or groups need additional project management mentoring and support?
- Has the system been configured in alignment with leading practices and the OOTB functionality?
- Is the organization ready for deployment of more advanced PPM functionality?
- Can the data be relied upon to make key business decisions?
- How has an application change influenced the usage?
- Has the PPM maturity of the IT organization been enhanced over time?
- What would be reasonable PPM adoption and maturity levels for next year?

WHAT IS MONITORED?

Adoption Metrics:

Transactions performed by the system users on PPM system entities. Customers can easily enable/disable the tracking any of the 23 standard user transactions including:

- Logon
- Update Work Plan
- Create Proposal
- Submit Timesheet

Maturity Metrics:

Indicators of organizational PPM maturity that have been derived from the Micro Focus PPM maturity model and other industry/academic sources. The 65 standard maturity metrics include:

- Project Class
- Planned Resources
- Value Rating
- Baseline Taken

Data Quality Metrics:

Indicators of data consistency, validity, timeliness and completeness. Over 60 data quality rules are included with the software, e.g. project issues must be updated within the last X days. Customers can write their own custom rules for processing by the add-on.

HOW IS INFORMATION CAPTURED AND REPORTED?

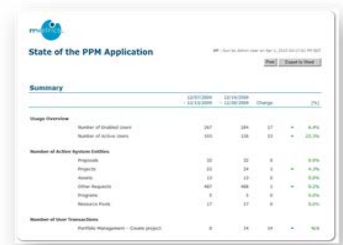

A seamless and sophisticated process executes periodically, gleans and infers critical adoption, maturity and data quality metrics out of the core PPM application. Using the standard PPM interface, users may then define flexible groups of users and system entities for targeted monitoring. Included are over 50 visualizations that provide everything from proposal usage trending, license allocations, overall usage and maturity to the current 'State of the Application.'

Track usage
