

# Kintana (Micro Focus) Deployment Management Offerings

## ACCELERATOR FEATURES

- Use of standard Oracle deployment calls
- Elimination of the Object Migrator
- Conversion of all AOL Object Types
- Integration with source control

## GENERAL SERVICES

- Workflow simplification
- Integration with external systems
- R12 upgrade support
- Optimize EBS deployment implementation
- Improve deployment speed and security

## OVERVIEW

Many of today's Kintana installations were designed and configured over a decade ago. Since then, most of these implementations have not changed much, while the underlying technologies and target applications have significantly evolved. As a result, while Kintana remains a stable solution, it clearly needs a modern touch for the sake of better performance, security, and compatibility. Therefore, we at PPMetrics, a company founded a decade ago by former Kintana employees, have decided to comprehensively address this need with a new accelerator and service offerings aimed at speeding up and modernizing your solution yet without any software/hardware or process changes.

## ORACLE EBS ACCELERATOR

While most organizations are upgrading from EBS R11 to R12, moving on to using Oracle's FND Load as a deployment standard, and shifting away from DB Links, many Kintana users are still tied down by the Object Migrator and its limitations. Our unique accelerator will completely eliminate the need for the Object Migrator, re-configure all your existing AOL objects to instead use FND Load, simplify your existing workflows, and integrate your source control systems to Kintana. The resulting changes will drastically reduce deployment times, reduce maintenance, and improve the productivity of the development and release teams.

## ACCELERATOR BENEFITS

## SERVICE OFFERINGS

We are the seasoned veterans of the Kintana world. Armed with years of development and implementation experience, first-hand interaction with dozens of the world's largest Oracle EBS customers, and deep domain knowledge, we are uniquely positioned to quickly and effectively give Kintana implementations a much-needed lift. Whether it is an upgrade project, advanced configuration work, or integration with an external system, our consultants have "been there, done that" and bring with them access to our internal repository of best practice configurations, documentation, and implementation methodologies.
